SHIP INSTRUCTIONS

Accurate Sound will generate the ship label for the shipment.

First ensure there are no other shipping or tracking labels attached to your package. (per UPS)

Print the ship label. Fold it in half and insert the label into a clear plastic ship envelope, remove the backing, and attach it to the box. It is also permissible to "affix the folded label using clear plastic shipping tape over the entire label."

Any UPS access point, store, or customer care center or UPS driver should be able to provide a clear plastic envelope for the ship label. Alternatively, use a large resealable Ziploc-type bag. Scanners must be able to read through the plastic envelope and shipping tape.

If making a drop-off, make sure the UPS representative scans the ship label into the system. They should ask for your e-address or cell number, so you receive notifications on the shipment. Accurate Sound also enters your e-address or cell phone number into the UPS tracking system to keep you informed on the progress of the shipment.
